

# NovaFount AS-902

*Alcohol Replacement for Lithography*

## Description

NovaFount AS-902 is an alcohol substitute, a replacement for alcohol in lithography.

## Directions

Use two to three percent solution for best results.

## Product Need and Usage

For those printers using unbaked positive plate emulsions, this product is formulated to minimize damage to the plate's image area during use. Formulas of this type may increase the viscosity of the fountain solution, allowing better delivery of fountain solution through many continuous dampening systems. The strong humectant effect provided should help keep dampening systems and blankets cleaner during use than more conventional alcohol replacement formulations.

## Features

- \* Low odor.
- \* Will not damage plate emulsions.
- \* Compatible with all fountain solutions.

## Technical Specifications

VOC (lb/gal method 24)	6.00
Specific Gravity	0.935
pH	NA
Dosage	2% to 3%
Color	Clear

Rev. 3/3/2009
