

NovaFount FA-541

Non-Piling Additive

Description

FA-541 Non-Piling Additive is a lubricating additive for fountain solution, formulated to reduce paper, ink and coating piling on web press printing blankets. It is completely compatible with fountain solution components and does not affect the conductivity, pH or other working properties of the fountain solution.

Directions

Add FA-541 Non-Piling Additive directly to the diluted fountain solution at the rate of 2-4 oz./gal. Excessive use will not further improve the performance. If piling continues to be a problem, contact Nova for technical assistance.

Product Need and Usage

The accumulation of ink, paper and paper coating on and around the image area on the blanket surface is a common nuisance to the printer. Fountain solution alone may not provide enough lubrication to prevent the build-up of this piling on the blanket. Conservative usage of FA-541 Non-Piling Additive will reduce piling, image loss and the need for excessive blanket washing.

Features

- * Reduces blanket piling, image loss.
- * Reduces blanket washing requirement.
- * Will not affect fountain solution chemistry.

Technical Specifications

VOC (lb/gal method 24)	4.40
Specific Gravity	1.054
pH	N/A
Dosage	2 to 4 oz./gal.
Color	Green
