

SP-520

Dampening Systems Cleaner

Description

SP-520 Dampening Systems Cleaner is a combination of water-soluble solvents, penetrating ink cleaners, and disinfectants designed to thoroughly clean dampening circulation systems on sheetfed or web presses.

Product Need and Usage

Contamination in sheetfed and web press dampening circulation systems is an unavoidable occurrence. Build-up of ink and paper lint forms a breeding ground for microorganisms. All of these can cause improper performance of the dampening system. Regular, periodic use of SP-520 will keep the tanks, trays, pipes and hoses clean and free of biological growth, ink and paper debris.

Directions

Drain the dampening system and wipe out any heavy debris in the tanks and dampening tray. Refill the storage tank with clean water. Add 8 oz./gal. of SP-520 Dampening Systems Cleaner to the fountain solution tank. For best results, use warm water and allow the solution to circulate for one hour. Drain the system and flush thoroughly with water to remove the loosened debris and cleaning solution. Refill the dampening system with fresh fountain solution.

Features

- * Cleans and removes ink, paper lint, and coating contamination.
- * Disinfects and removes bacteria, fungus and algae growth.
- * Contains an anti-foam additive.

Technical Specifications

Flash Point (°F TCC)	>200
VOC (lb/gal method 24)	0.50
Specific Gravity	1.00
Water-Miscible	Yes
Color	Green
Odor/Fragrance	Mild Solvent

Rev. 9/11/2008
