

# N-251

Step One Wash

## Description

N-251 Step One Wash is a special emulsion of solvents, emulsifiers and water, designed to deep clean ink and press contaminants from ink train rollers. N-251 should be used in conjunction with Nova N-230, as the step two, to thoroughly rinse wash and residue from the rollers.

## Directions

Apply N-251 Step One Wash to the ink roller train, allow it to run in for several minutes, and engage the wash-up blade. When ink is removed, disengage the wash-up blade and repeat the process. Apply N-230 as a final wash/rinse step, until N-251 is removed and rollers are thoroughly clean.

## Product Need and Usage

N-251 Step One Wash is recommended for thorough wash-up between color changes, or for regular periodic roller wash-up to thoroughly remove ink, surfactants and build-up of contaminants. Regular use of N-251 with N-230 will keep rollers in tip-top form for optimum ink transfer properties.

## Features

- \* Deep cleans for ink color changes.
- \* Removes surfactants and built-up contaminants.
- \* Safe for nitrile and composite rollers.
- \* Low odor, user-friendly formula.

## Technical Specifications

Drying Speed	Slow
Water-Miscible	Yes
Flash Point (°F TCC)	107
VOC (lb/gal method 24)	4.90
Vapor Pressure (mm HG)	2
Odor/Fragrance	Mild Solvent
